

Delivering Business Solutions with Innovative Technology

At Intelliware, we understand the challenges Financial Services institutions face – growing demand for more products and better services with pressure to respond to ever-increasing operational and regulatory demands.

Our deep understanding of Financial Services along with our proven custom software development process rapidly deliver solutions with maximum business impact. We jump start your initiatives and get them fully operational on time and on budget.

Technology assessments and Roadmaps, platform migration, system integration, portals, transaction processing application development, mobile solutions – we've done it all for leading Financial Services institutions. We're known for tackling the toughest business challenges and navigating through the most complex technical issues to deliver exceptional results.

From Roadmaps to roll-out and beyond – we deliver maximum business impact

From proof-of-concept prototypes to bulletproof, long living, high volume production applications – we can build a solution that meets your exact requirements.

Intelliware's iterative, collaborative process ensures the highest standard of quality and reliability. Our disciplined project management, frequent software releases and close collaboration with your business and technical stakeholders guide your project to success.

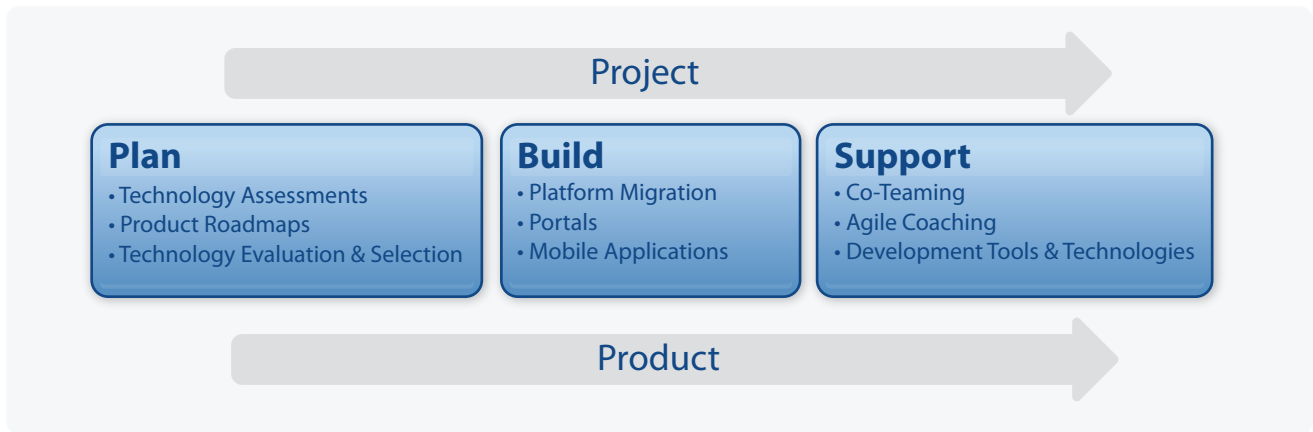

Intelliware is a custom software development, mobile solutions and services company.

Based in Toronto and recognized as a leading practitioner of Agile development practices, we have a proven record for delivering timely, high quality solutions for our clients.

Intelliware has been chosen as a technical partner by a wide range of national and global organizations in the Financial Services, e-Health, ICT, Retail, Manufacturing and Government sectors.

We've solved complex business problems for:

- Custody & Trust
- Fund Accounting & Transfer Agency
- Institutional Reporting & Compliance
- Wealth Management Analytics
- Commercial Insurance Underwriting
- Plan Member Reporting Portals
- Benefits Adjudication & Administration
- Risk Management
- Transactional Data Optimization
- Straight Through Processing
- On Demand Report Generation
- Claims Process Management
- Broker & Advisor Portals
- Consumer Transaction Portals

Plan

Our strategic planning engagements are thorough, highly pragmatic and action oriented.

Build

Our custom software development projects deliver results using our unique i-Proving™ methodology.

Support

When you partner with Intelliware, you will benefit from extensive coaching and knowledge transfer from our team, our processes and our tools. This means you won't have to rely on a third party for maintaining and updating your systems once the engagement is over.

Leading Financial Services institutions rely on Intelliware

At Intelliware, Delivery Matters.™ It's the driving force behind everything we do – our people, processes and organization are all focused on providing exceptional solutions for our clients. We have delivered successful projects to leading Banking, Custody and Trust, Investment, Insurance, Wealth Management, Loyalty and related businesses for over 20 years. Our success is built upon the following core principles:

Value early and often

The practical application of Agile methods – short and iterative delivery cycles, strong stakeholder participation, empowered teams, responsive requirements handling and frequent prioritization – allows for the delivery of real and high-quality business value early and often.

Reliable delivery lowers project risk

Agile methods involve close communication between the development team and business stakeholders as well as automated testing, continuous integration and regular incremental releases. These practices ensure key project risks are identified and mitigated at the start of the project and result in the reliable delivery of production quality systems.

Bright people with advanced technical expertise

As a destination employer, we hire highly qualified staff and continue to cultivate learning and a deep knowledge of standards-based technologies, distributed architectures and systems integration strategies. This significantly shortens development time frames, improves application quality and reduces project risk.
